STAR STORIES OF THE NATIVE AMERICANS

This traditionally styled planetarium show explores the night sky legends of the Native Americans. Discover how these tales helped to develop an understanding of the night sky and its importance to the Native American people. Hear the stories of the great sky bear, the frog sisters and the pathway of souls, and explore the modern astronomy behind the legends.

STARS

Every star has a tale. Some are as old as time, faint and almost forgotten. Others burn bright and end their lives in powerful explosions. New stars are created every day, born of vast clouds of gas and dust. Through every phase of their existence, stars release the energy that powers the Universe. Journey to the furthest reaches of our galaxy and experience both the awesome beauty & destructive power of STARS.

HEART OF THE SUN

See the Sun as it has never been seen before. From ancient cultures and the dawning of Aristotelian science, to new space-based telescopes and terrestrial instruments, explore our star with unprecedented clarity. See how the development of our cosmology has been informed by our struggle with this oldest of mysteries. Experience the story that shows how that process continues today.
